Basic Casualty Extraction (BCE01)

This course provides essential training for employees in workplaces on how to safely and effectively extract casualties in the event of an emergency. Participants will learn the fundamental principles of casualty extraction, including risk assessment, safe handling techniques, and coordination with emergency services.

This course is designed for all employees in UK workplaces and factories, including safety officers, supervisors, and general staff. No prior medical training is required but a current first aid certificate is required.

The course is typically conducted over one day, with a mix of theoretical and practical sessions.

Course Contents

- Understand the importance of casualty extraction in workplace safety.
- Identify potential hazards and assess risks associated with casualty extraction.
- Learn and practice safe handling techniques for moving casualties.
- Coordinate effectively with emergency services during an extraction.
- Develop a clear action plan for casualty extraction in various scenarios.

Learning Outcomes

- Importance of timely and safe extraction
- Legal and ethical considerations
- Identifying common workplace hazards
- Conducting risk assessments
- Application of basic first aid principles
- Techniques for lifting and moving casualties safely
- Communicating effectively with emergency responders
- Understanding the roles and responsibilities during an emergency
- Practical exercises and simulations
- Developing and implementing action plans

Course Assessment

- Written assessment
- Practical assessment
