

Advanced Rooftop Safety (ART02)

This practical Advanced Rooftop Safety Training course is designed for individuals who already have a basic understanding of rooftop safety and need to develop more advanced skills for working safely at height.

The course builds on basic rooftop safety training, providing hands-on instruction in work restraint, fall arrest and work positioning techniques.

Practical exercises cover work positioning on inclined and vertical surfaces, ladder climbing using twin fall arrest lanyards, rope and equipment pre-use checks, and essential knots including the figure of eight, double figure of eight, alpine butterfly and double fisherman's knot.

Delegates will have the opportunity to put these techniques into practice in a controlled training environment before completing a practical assessment.

Course Content

- Work restraint, fall arrest and work positioning
- Work positioning harness pre-use checks and fitting
- Anchor points
- Rope pre-use checks
- Knots (figure of eight, double figure of eight, alpine butterfly and double fisherman's)
- Work positioning techniques using Petzl Grillon (inclined and vertical)
- Fall arrest techniques using inertia reel and Rocker
- Ladder climbing using twin fall arrest lanyards
- Practical use of all of the above

Basic rooftop safety training must have been carried out prior to advanced safety training

Learning Outcomes

- Select, inspect and correctly use specialist work at height equipment including:
 - Work positioning harnesses
 - Ropes
 - Anchor points
 - Petzl Grillon devices
 - Inertia reels
 - Rockers
 - Twin fall arrest lanyards

Course Assessment

- Direct and practical observation
- Written assessment

1 day

Maximum of 6 people

Training Academy
or on-site

Eurosafe Certificate
Valid for 3 years
