

HWPB Fall Arrest Devices

These devices have been manufactured, tested and certified in Germany to conform to the European Standard DIN EN 360, as a Retractable Type Fall Arrest Device.

The IKAR HWPB Devices have been specifically developed to offer fall protection in an easy to use unit.

Working similar to a car safety belt, during normal use the user can move freely whilst the webbing life-line is kept under permanent tension. In the event of a fall the locking system will activate and the internal brake disk will absorb energy to well below the 6kN limit required by the DIN EN 360 standard.

These low maintenance devices have a hard wearing, shockproof plastic housing and offer extremely low weight. The units have a swivelled eye attachment point to prevent the webbing life-line from twisting.

IKAR HWPB Devices have been subjected to additional testing for horizontal use and can therefore be used where the user could potentially fall over a leading edge.

Product features:

- Easy to use, low-maintenance design
- Load carrying capacity
 - 1 person, 136kg – max
- Various life-line lengths available
- Shockproof plastic housing
- Single handed, double action hook to connect to the users harness
- Attachment eye has swivel function to eliminate cable twisting
- Low unit weight
- World renowned German build quality

Suggested accessories:

- SK00 small attachment karabiner
- IK-AS steel cable anchor sling
- IK-AB webbing anchor sling
